

INTRODUCTION

BabyAAPT is needed to support and develop our primary **\$AAPT** token. Creating a support token means we can build a more robust ecosystem with two tokens helping each other grow. The continuous development and improvement of all its products give our investors the confidence that all initiatives and products are in their best form and fully functional when released to the market.

The release of a new token always attracts the attention of new investors and allows us to attract additional interest in all the team's products. Due to its low starting market cap and new marketing approach, it is a more volatile asset.

The new tokenomics has been created per market conditions and will positively impact **\$AAPT** and the support token.

BabyAAPT Tokenomics

One of the most exciting features of tokenomics is to reward investors with the **\$AAPT** token. 5% of each transaction automatically buys back the **\$AAPT** token and distributes it to **\$BabyAAPT** holders. **\$BabyAAPT** will allow us to consistently burn even more of the core token, provide more benefits to **\$AAPT** holders and give rewards to **\$BabyAAPT** holders.

Also, an increase in buyback compared to **\$AAPT** will give a high rate of decrease in the total supply of tokens in the market.

\$BabyAAPT Total Supply: 100,000,000,000 (100 Billion).

Buy/Sell Tax

14% Buy/Sell tax
5% rewards in **\$AAPT**
5% will go to the marketing and development wallet
3% will contribute to a Buyback and Burn function
1% added back into the locked Liquidity Pool

Special features

- **\$AAPT** rewards: Earn **\$AAPT** just by holding **\$BabyAAPT**!
- Auto-Buyback: The accrued taxes for Buyback & Burn will be triggered to automatically occur following a sell, reducing negative price movement and maintaining a more consistent buy pressure. Burning a token means buying a portion of the **\$BabyAAPT** tokens and then sending them to a "dead" address, essentially reducing the overall supply and increasing the value of the remaining tokens in rotation.

Marketing

We have chosen to market **\$BabyAAPT** via a different marketing strategy, which should attract more interested investors. If we were to use classical marketing to promote **\$AAPT** to bring it to the CEX, which makes it possible to call **\$AAPT** an altcoin, then for **\$BabyAAPT**, it was decided to use aggressive marketing.

The constant mention of the project in various thematic sources should give increased volatility and rewards for holders. It should also allow Escrow to develop and progress regardless of market conditions.
